SUMMARY

MS in Computer and Information Technology at Purdue University (GPA 4.0, graduating August 2026) seeking full-time roles in Responsible ML and Data Science. 1 year of industry experience at the intersection of data and security.

EDUCATION

Purdue University, MS in Computer and Information Technology **GPA: 4.0/4.0** Aug 2024 – Aug 2026

Coursework: Responsible Data Science, IT Data Analytics, Experimental Statistics, HCI, AI, Social Engineering Mitigation.

PES University, Bachelor of Technology in Computer Science **GPA: 9.06/10** Aug 2019 – May 2023

Coursework: Big Data, Information Retrieval, Network Analysis and Mining, NLP, DBMS, Object-Oriented Design.

6-time MRD Scholar (top 20% of semester).

EXPERIENCE

Data Science Intern, Leen, *San Francisco, CA* July 2025 – August 2025

- Designed 3 API-based data connectors consolidating GRC entity, evidence, assessments, and controls data from ServiceNow GRC, OneTrust, and Archer into unified data models; contributed quickly to customer onboarding and revenue generation in a fast-paced startup environment.

Software Engineer, Palo Alto Networks, *Bengaluru, KA* Aug 2023 – July 2024

- Built automated testing pipelines using Jenkins across VM and hardware Panorama and Firewall devices (3k, 5k, 7k series), improving code coverage from 23% to 78%, for logging/reporting infrastructure.
- Developed sanity test suite to validate root certificate integrity across 8 PanOS releases and 12 million HW/VM/SW firewall and management-infra devices.

Software Engineer Intern, Palo Alto Networks, *Bengaluru, KA* Jan 2023 – July 2023

- Reduced automation backlog by 30% via regression suite integration using pytest and gnmic; expanded REST APIs across six PanOS releases using Selenium for streaming telemetry.

Software Engineer Intern, Nasdaq, *Bengaluru, KA* June 2022 – July 2022

- Engaged in performance-based analysis of enterprise blockchains on over 17 criteria, including VMware Blockchain, Hyperledger Fabric, Hyperledger Besu, and R3 Corda for proprietary use cases, utilizing Hyperledger Caliper.

RESEARCH & PROJECTS

Data Valuation for Label Error Detection in ML Pipelines *MS Thesis, Purdue RDS Lab* Aug 2024 – Present

- Developing Shapley-value-based data valuation methods to detect and repair mislabeled training data in ML pipelines, with focus on improving model fairness, reliability, and explainability. Supervised by Dr. Romila Pradhan.

Time Sensitive Chemical Identification Tool *Corporate project: Dow, TDM 511*

- Worked with corporate mentors to develop a multi-stage XGBoost model predicting chemical peroxide formation using feature engineering (ionic charges, molecular weights) and systematic feature selection.

An Interpretable Hybrid Recommender System Based on Graph Convolution to Address Serendipity *Published at CCCE'23, Stockholm* 

RePI: Research Paper Impact Analysis *Published at ISDA'22* 

SKILLS

Languages & Databases	Python, C/C++, Git, Ruby, SQL, Java, MATLAB, SAS, MongoDB, React.js, HTML
Technical Tools	Docker, REST APIs, Git, Hadoop, Spark, Linux, Jenkins, LLMs, GenAI, AWS, GCP
Skills	Responsible ML, ML pipeline engineering, API and data integration, Test automation
